

Course code	Course Title	No. of Periods/Weeks	Total No. of periods	Marks for FA	Marks for SA
CM- 406	Web Technologies Lab	4	60	40	60

Chapter No.	Chapter/Unit Title	No. of Periods	CO's Mapped
1.	Exercise on HTML, CSS&XML	15	CO1
2.	Exercises on Java Script, J Query	20	CO2, CO3
3.	Exercises on PHP web applications and Database Applications	25	CO3,CO4
Total Periods		60	
Course Objectives	i) Understand the principles of creating an effective web page ii) To Know the working with HTML, CSS iii) To acquire knowledge and skills for creation of web site considering both client and server side iv) To familiarize the various Technologies like Java Script, JQuery, PHP. V)To understand Database connectivity Using PHP		

Course Outcomes	CO1	CM-406.1	Implement interactive web page(s) using HTML, CSS and JavaScript.
	CO2	CM-406.2	To know the Usage of J Query
	CO3	CM-406.3	Build Dynamic web site using server side PHP Programming
	CO4	CM-406.4	To know database connectivity using PHP.
	CO5	CM-406.5	Develop real world application with different web designing tools.

CO-PO/PSO Matrix:

CO NO.	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
CM-406.1	2	2	3	2		2	1	2	3	2
CM-406.2	1	3	3	3	1	3	1	3	3	3
CM-406.3		2	3	2	1	3	1	2	3	3
CM-406.4	1	1	3	2	2	3	2	2	3	3
CM-406.5	3	3	3	3	2	3	2	3	3	3
Average	1.5	2.6	3	2.6	1.5	3	1.5	2	3	1.5

3=strongly mapped, 2=moderately mapped, 1=slightly mapped

LEARNING OUTCOMES**HTML, CSS and XML:**

1. Exercise on basic HTML tags.
2. Design a HTML page using suitable table tags and attributes.
3. Design a HTML page with a form containing various controls.
4. Design a HTML page on iframes.
5. Exercise on style.
6. Exercise on designing an XML document.

JavaScript, AJAX & J Query:

7. Exercise on JavaScript functions.
8. Exercise on JavaScript arrays.
9. Write a program on mouse events using J Query.
10. Design a webpage to apply the Effects of J Query to HTML elements.
11. Exercise on changing background color using css () function in J Query.
12. Write a JavaScript program using Responsive Slides J query plug in (download from responsiveslides.com)

PHP:

13. Install the following on local machine:
 - Apache Web server
 - My SQL
 - PHP and configure it to work with Apache Web server and MySQL.
14. Exercise on PHP arrays.
15. Design a form and access the elements of form using PHP.
16. Write PHP program to perform various operations on a database table using functions.
17. Write a PHP program to set a cookie.

KEY COMPETENCIES

Exp. No.	Name of the experiment	Objectives	Key Competencies
1	Exercise on basic HTML tags	Create the HTML page with a title, heading, formatting and list tags in the body.	1) Identify the editor required for writing HTML 2) Add the tags with relevant content 3) Save the file 4) Open the file in browser 5) Test the results
2	Design a HTML page using suitable table tags and attributes	Create the HTML page with a table and that table should have a header, body and footer.	1) Identify the tags for creating the table 2) Add header, body and footer to the table. 3) Put some content in each section of table 4) Save the file 5) Open the file in browser 6) Test the results
3	Design a HTML page with a form containing various controls	Create the HTML page with a form and add some controls like textbox, label to the form.	1) Identify the tags to add a form and controls 2) Add the form and put some controls in it. 3) Save the file 4) Open the file in browser 5) Test the results
4	Design a HTML page on frames	Create the HTML page with multiple if rames so that content in each frame will have different format and colors.	1) Identify the tags for creating multiple frames 2) Add some content to the frames and use different formats, colors for each frame. 3) Save the file 4) Open the file in a browser 5) Test the results
5	Design a style sheet to set the background color, position and dimensions of a HTML element	Create a style sheet which contains selectors to set the background color, position and dimensions of a HTML element.	6) Identify the editor required for creating CSS 7) Add selectors to set the background color, position and dimensions of an element. 8) Save the CSS file 9) Link the CSS file to a valid HTML page. 10) Save the HTML page 11) Open the HTML page in a browser 12) Test the results

Exp. No.	Name of the experiment	Objectives	Key Competencies
6	Exercise on designing an XML document	Create an XML Document on Student data	1) Identify the editor required for creating XML 2) Add required elements for student data 3) Save the XML file as .xml extension 4) Open the XML document in browser 5) Test the results
7	Exercise on JavaScript functions	Write a JavaScript program using function which performs sum of two numbers and function should call when button is clicked.	1) Create a HTML file 2) Write a JavaScript function which adds two numbers. 3) Add HTML button tag and assign a function to on click attribute. 4) Save the HTML file. 5) Open the HTML page in a browser 6) Test the results Resolve the errors if any through debugging
8	Exercise on JavaScript arrays	Write JavaScript code to implement sorting like reading an array of 'n' numbers and sorting them in ascending order.	1) Create a HTML file 2) Add elements to read array and to sort. 3) Write the logic for sorting using iterative and conditional statements. 4) Save the HTML file. 5) Open the HTML page in a browser 6) Test the results Resolve the errors if any through debugging
9	Write a program on mouse events using J Query	Write a JavaScript program using J Query which displays different messages for mouse events like mouse enter, mouse leave, click, dblclick	1) Create a HTML file 2) Add a div tag with some content and border. 3) Write a J Query functions which displays different messages when mouse enters in div tag, mouse leaves div tag and clicks on div tag. 4) Save the HTML file. 5) Open the HTML page in a browser 6) Test the results by moving mouse over the div tag. 7) Resolve the errors if any through debugging

Exp. No.	Name of the experiment	Objectives	Key Competencies
10	Design a webpage to apply the Effects of J Query	Write a JavaScript program using J Query which performs effects like hide, show, slide up fade In, fadeout, slide Down, Slide Up	1) Create a HTML file 2) Add a div tag with some content and border. 3) Add some buttons 4) Write a J Query functions which performs some effect when click on respective button. 5) Save the HTML file. 6) Open the HTML page in a browser 7) Test the results by click on the button. Resolve the errors if any through debugging
11	Exercise on changing background color using CSS properties in J Query	Write a JavaScript program using J Query which changes CSS properties like color, background-color, border etc.	1) Create a HTML file 2) Add a div tag with some content 3) Add some buttons 4) Write a J Query functions which changes CSS properties like color, border when click on respective button. 5) Save the HTML file. 6) Open the HTML page in a browser 7) Test the results by click on the button. Resolve the errors if any through debugging
12	Write a JavaScript program using the results plug in (download from responsiveslides.com)	Write a JavaScript program using J Query which displays date picker.	1) Create a HTML file 2) Add J Query script tag. 3) Add slider plug in, which can be downloaded from http://responsiveslides.com 4) Add plug ins file 5) Add images 6) Write J Query code for display slideshow of images 7) Save the HTML file. 8) Open the HTML page in a browser 9) Test the results by click on the button. Resolve the errors if any through debugging
13	Install the following on local machine: • Apache Web server • My SQL • PHP and configure it to work with Apache Web server and My SQL.	Install a web server which supports PHP	1) Identify version compatible to system 2) Download the software 3) Install the server software 4) Configure the server 5) Write simple PHP program 6) Test the result

Exp. No.	Name of the experiment	Objectives	Key Competencies
14	Exercise on PHP arrays	Write PHP program to implement searching like reading an array of 'n' numbers and finding smallest among them.	1) Create a PHP file. 2) Add elements to read array and to find the smallest number. 3) Write the logic for sorting using iterative and conditional statements. 4) Save and run the page. Test the result
15	Design a form and access the elements of form using PHP	Write a PHP program which displays sum of two numbers submitted by the form	1) Create a HTML file 2) Add form with two textboxes for enter two numbers 3) Write a PHP program, which adds two numbers submitted by form and display the sum. 4) Place the files in server 5) Open the HTML file in browser 6) Test the results
16	Write PHP code to perform various operations on a database table using functions.	Write PHP code to perform retrieval, insertion, modification and deletion of data in a database table using functions	1) Understand the process of connecting to database and execute commands. 2) Create a PHP file. 3) Add required elements to the page. 4) Write the logic to retrieve, insert, update and delete data in the table using functions. 5) Save and run the page. 6) Test the result
17	Write a PHP program to set a cookie.	Write PHP code to create a cookie and put some information in it.	1) Understand the significance of cookies. 2) Create a PHP file. 3) Write the logic to create and set a cookie 4) Save and run the page. 5) Test the result.
